

CHECKLIST

- I have done enough work on the code. Although I evaluated all kinds of situations, I could not get the devices with SwitchTime to sort their SwitchTime times and output accordingly when creating the ZReport command. Even though it prints Smart Devices with SwitchTime first, I can't sort by date.
- In the content of the report, I created the desired UML diagram. But other things required for the UML system are missing. I did not explain them.

I think I have handled all the other requested situations. I'm sorry if there is any other problem.
Thanks for your enthusiasm.
